

Cold weather alert – Further Severe Winter Weather Forecast

9th January 2017

Dear colleagues,

There is further severe cold weather predicted between Thursday 12th January onwards in the West Midlands, with an increased risk of snow showers, severe cold weather and icy conditions. We are likely to have further periods of severe cold weather during the month of January. Please do monitor the weather forecast and cold weather alert pages at the following links for up to date information:

<http://www.metoffice.gov.uk/public/weather/forecast/#?tab=map>

<http://www.metoffice.gov.uk/public/weather/cold-weather-alert/#?tab=coldWeatherAlert>

Given the current seasonal pressure on health and care services, we are very grateful for your support to ensure the mitigation of risks to health that the cold weather poses, particularly for the most vulnerable, such as the very old, the very young and those with chronic illnesses.

Cold kills, even in places where temperatures are not at their lowest. Most of the health impacts caused by cold weather occur at moderate outdoor temperatures of between 4°C and 8°C.

We would like to ask you to ensure the following actions are taken now in preparation for, and for the duration of the period of severe winter weather:

- Make sure that staff members have identified all those vulnerable to cold weather and that arrangements are in place to support and protect them appropriately
- Ensure staff are undertaking appropriate checks when attending to individuals, e.g. room temperature (18°C minimum both during the day and at night); ensuring sufficient supply of medications and food, and that individuals have an emergency contact number

available. Arrange daily contacts/visits to those who are most vulnerable, and ensure signposting to appropriate services for those who are in need.

- Ensure business continuity plans are in place, and that services are equipped to cope with surges in demand. Make sure that the best use is made of capacity in services, moving individuals from acute beds to community beds/care where appropriate.
- Please see key public health messages outlined in the blue boxes below, as well as links to the Stay Well in Winter campaign materials. Please ensure all staff are familiar with these messages and reinforcing them with all customers/service users/patients. Further messages to give include: ensuring that people check in on vulnerable neighbours and support them with clearing snow and ice from driveways and walkways to allow access; and making sure people dress for the weather and avoid exposing themselves to cold or icy conditions if they are at higher risk of cold-related illness or falls.
- If you are concerned about somebody who is unable to adequately heat their home, for advice about keeping energy bills down, benefits entitlements and qualification for loft and cavity wall insulation and other heating measures (please note these are not emergency numbers):
 - **Coventry** - ring The Affordable Warmth Team on 024 7683 2330
 - **Warwickshire** - ring The Act on Energy helpline 0800 988 2881.

We would be grateful if you could cascade this information to all your staff.

Stay well this winter advice:

Key Public Health Messages

Keep your home warm, efficiently and safely

- Heating your home to 18°C in winter poses minimal risk to your health when you are wearing suitable clothing.
- Get your heating system and cooking appliances checked and keep your home well ventilated.
- Use your electric blanket as instructed and get it tested every three years. Never use a hot water bottle with an electric blanket.
- Do not use a gas oven or cooker to heat your home, it is inefficient and there is a risk of carbon monoxide poisoning, which can kill.
- Make sure you have a supply of heating oil or LPG or solid fuel if you are not on mains gas or electricity to make sure you do not run out in winter

Keep in the warmth by

- Fitting draught proofing to seal any gaps around windows and doors
- Make sure you have loft insulation. If you have cavity walls make sure they are insulated too.
- Insulate your hot water cylinder and pipes
- Draw your curtains at dusk to keep the heat generated inside your rooms
- Make sure your radiators are not obstructed by furniture or curtains.

Look after yourself

- Food is a vital source of energy and helps keep your body warm so have plenty of hot food and drinks
- Aim to include five portions of fruits and vegetables. Tinned and frozen vegetables count toward your five a day
- Stock up on tinned and frozen foods so you don't need to go out too much when it's cold and icy.
- Exercise is good for you all year round and it can keep you warm in winter
- If possible, try to move around at least once an hour, but remember to speak to your GP before starting any exercise plans
- Wear lots of thin layers- clothes made from cotton, wool or fleecy fibres are particularly good and maintain body heat.
- Wear good fitting slippers with a grip indoors and shoes with a good grip outside to prevent trips slips and falls.
- Make sure you have spare medication in case you are unable to go out
- Check if you are eligible for inclusion on the **priority services register**, operated by your water and power supplier

Key Public Health Messages

Look after Others

- Check on older neighbours or relatives, especially those living alone or who have serious illnesses to make sure they are safe, warm and well.

Get Financial Support

- There are grants, benefits and advice to make your home more energy efficient, improve your heating or help with bills. It's worthwhile claiming all the benefits you are entitled to before winter sets in.
